## Loss Prevention

Floating Impact Program

Admiral Security Services, Inc. provides loss prevention undercover agents that catch shop lifters in a retail location and aim to reduce theft and overall store shrink. Industry standard has measured the ROI on the program based on the dollar amount retrieved in apprehensions by these agents. This in most cases has highlighted how a permanent loss prevention program at the store will reflect a loss. Our goal is your profitability by reducing your losses, our motive is to align with store business objectives and show value vs. becoming an expense.

We believe to show value, we must highlight all items that an LP program offers:

1. Reduce store shrink
2. Add an invisible layer of protection that collaborates with security and deters theft
3. Provides internal presence that combats internal theft
4. Deterrence
5. Combats ORC (Organized Crime Groups) that come in waves
6. An onsite available security professional able to act when an apprehension is needed

We propose a solution that is reactionary when there is a spike in crime, theft or high shrink. A team of dedicated professional high-level security loss prevention individuals that get assigned to a location for a short-term assignment 4 – 6 weeks. This can be unannounced and coordinated by upper management based on data. The objective is to clean house, create impact, make a statement, reset negative data on shrink and deter theft. The assignment may continue until the number of stops go down or the shrink levels are back at optimal levels. The team can move sequentially from one location and assignment to another.

The result of this strategic plan will have great impact on the regular shoplifters, the ORC groups, and the internal thefts. The impact of this should be less shrink, confirmation of an employee's integrity, and a boost of confidence from Store Leadership who enjoy LP presence. The store's safety and security are the priority and LP coverage will provide an additional layer to achieve those goals.
